Trees are dying en masse in Germany;
the only way to survive is Homa Therapy.

Trees Dying En Masse In Germany

3

The only way to survive is Homa Therapy
West Germany

We grow our garden using Homa Therapy Farming methods and grow wonderful crops without chemical fertilizers or pesticides. In Germany trees in forests have started falling en masse and we think it would benefit the country immensely if the authorities care to examine *Homa Therapy Farming* practices given through Vedas. We discussed this subject with some specialists.

Pro. Hans Ulrich Moosmayer, Director, State Forest Research Institute Freiburg gave the following reasons for the destruction of pine trees in Black Forest area.

- Concentration of impurities in the air especially sulphur dioxide. The vapour rises in the atmosphere and dissolves in the water particles. Result is acid rain and thus soil is poisoned. Aluminum ions are released destroying the roots of trees. This eight year old hypothesis is based on the investigation carried out by Pro. Ulrich, Gottingen.
- Extreme dryness due to aluminum ions.
- Wet core in the inside of the tree.
- The needles fall off and the assimilation process is hampered.

We then discussed Homa Therapy Farming to save the trees. He suggested first to take trials in the garden with plants.

September 3 we had a telephone conversation with Dr. Stein of Plant Protection Division, Department of Agriculture, Freiburg.

We gave suggestions for planting new forests based on *Homa Therapy Farming* practices.

- To make the seeds disease resistant by soaking them in cow's urine for two hours.
- Planting on Full-Moon, No-Moon cycle.
- Daily Agnihotra and several hours of *Yajnya*.

Dr. Stein replied various alternative biological methods should be tested with Homa Therapy experiments. He mentioned the following points.

- Can the operating staff make the experiments?
- Can the experiment be repeated by anyone?
- Analysis of cost comparison.
- Consultation with Department of Agriculture is necessary.

Opposite: Diseased fir trees with thinning and gray crowns. Many needles have fallen off the twigs.

4

Telephone conversation on 26th August with Dr. Gruber of Agriculture Department, Offenburg. We had previously supplied him the following literature.

- Homa Therapy Farming Bulletins published by Agnihotra University USA.
- How to do Agnihotra flyer.
- Experiment with grapes published in German *Satsang*.

Dr. Gruber said it may be possible to measure the immunity from disease by practicing Homa Therapy Farming methods. Discussions on similar lines were held also with some others.

Mr. Hubert Schneider who is in charge of tree maintenance in Bischoffingen, Kaiserstuhl told us the following.

- Berry bushes and fruit trees in the area have been attacked by unknown diseases.
- Edges of the leaves curve inside.
- Outer bark gets loosened and the tree dies.

The most shocking thing is newly planted trees in the area do not grow anymore.

With trees dying en masse the oxygen-carbon cycle is disturbed. *Let us start Homa on a mass scale to save ourselves from this impending disaster. In Homa atmosphere the forests will flourish.*

Anne & Kurt Rennig

I heard the following statements on the radio. Forests are dying in Europe especially Germany in industrial areas. In the state Nordrhein-Westfalen e.g. The Rhein and Ruhr Rivers areas have been hit hard. Poisonous material has been found in the needles of many trees.

Trees fall and die without heavy winds. They turn brown as if they are not receiving enough moisture although there is sufficient rain. White fir, spruce and pine are being destroyed.

There is no use in replanting since the soil is affected too. New trees just won't grow. Rain washes poisons down from the needles or leaves and harmful compounds remain in the soil. Not only are trees destroyed but many mosses are not growing because of air pollution. Forests in Eastern European countries are also affected.

Gabriele Masill

East Germany

The whole region facing the border to Czechoslovakia is unofficially known as polluted area number one. Trees are dying on an unimaginable scale especially spruce. Our forests look like they are burnt down as if they had been a theatre of war. We are affected by the waste gases of a big industry region where sulphur containing coal is being worked up. The concentration of the waste gases has become so high that it is said it is the maximum. Now there is no way out except regulation revenge by nature.

Obvious signs of pollution are difficulties to breathe, dizziness and routine headaches. I realized that we don't have methods to avert these terrible consequences of our civilization. Is it too late? Many people here are so deadened. They got accustomed to it. More and more new diseases emerge which are nearly impossible to diagnose, to say nothing of healing. But these things are not spoken openly. The doctors of medicine won't do anything. They also do not have the knowledge.

In recent years many swarms of bees have been dying. The cause is arsenic rain.

G.M.

Flashback from Satsang January 18, 1979

Terrible things coming. Regions of Germany where the soil is extremely fertile trees will just fall over, plants will not grow. When the scientists test the soil they can find no reason except small percentages of elements are missing and some trace elements. It is the radiation from the bowels of the earth causing it. Scientists beware. It is a law of reap as you sow operating. It is inviolable. It is unavoidable and by Grace we have come on this planet to take you out of the clutches of death.

Fissures begin to show up in U.S.S.R. and astound scientists by their breadth and depth. This happens in areas where they would normally feel this could never happen.

Crops get planted once, twice, thrice and nothing grows. Not even weeds. Farmers take care. Listen to what we have been telling. It is accurate, precise.

Birds migrate south to Jackson, Mississippi.

Globular disturbance coming now.

Save The Trees

(Following are excerpts from Vasant's talks in Europe 1981)

Trees begin to lose their hold in the ground. The soil is having difficulty supporting life. Trees tend to fall over. We must renourish the ground through Yajnya and Yajnya Therapy.

Trace elements in the soil are changing drastically. Trace elements in the soil are so important to plant growth and maturation.

Chemical fertilizers will now prove less and less effective. Also there will be more governmental regulation against health hazards. Only way out then is *Yajnya*. Homa Therapy Farming is the answer.

When Homa is done in a garden or under a tree the effect of the smoke first goes to the leaves. The smoke acts as a catalyst for the generation of chlorophyll in terms of a chemical reaction which can easily be shown to someone by a botanist who may choose to study the subject.

Elements of earth are changing. Agnihotra is the process whereby the molecular components of elements are restructured to a similar form in which they now exist. Without Agnihotra this restructuring can not take place and hence it becomes impossible for all forms of life to exist on this planet. The first thing this affects is the atmosphere, next because of this the plants and next destruction. Only way out is to perform Agnihotra.

Agnihotra and Agnihotra ash when put in soil help stabilize the amounts of nitrogen and potassium present.

We have to think in terms of helping to start new forests even. This can be done with Homa and the forests will flourish quickly.

The oxygen recycling system of nature has been seriously disturbed. New forests must be planted with the use of Homa. New bodies of water must be created and old ones purified by Grace and use of Homa.

Scientists please note that trees in Kansas now begin falling.

Agnihotra Cured the Impossible

On 26.11.79 my son Ulrich and his wife brought one dwarf potted orange tree home. It had no more leaves and its roots were rotten.

Next day I removed the rotten parts from the roots and put the plant in fresh soil mixed with Agnihotra Ash. Also on top of the soil I gave Agnihotra Ash. Next I kept it in the room where we do regularly Agnihotra.

After only four days the branches had new sprouts. After ten days on every branch leaves could be seen.

During this time I used specially prepared Agnihotra Ash water for watering. We treated the plant as it was mentioned in the Homa Therapy Farming Bulletins published by Agnihotra University U.S.A.

Till this day I am wondering how the plant was able to improve again in such a short time. Where did it get the power to do so? Our family believes that it came through the help of Agnihotra atmosphere and Agnihotra Ashes as stated in Homa Therapy Farming Bulletins.

Mrs. Agnes Szcypior
Oberaden, West Germany

Visit to Israel

During June I visited Homa Therapy Centre at Arad, Israel which is run under the guidance of Sam Kaplan. Arad is quite close to the Dead Sea and the centre started there three years ago is getting more and more visitors and requests to teach Homa farming, Homa medicine and Homa meditation. People just like to walk in to join Agnihotra.

Sam accompanied me to several places in Israel and it was all wonderful. In Jerusalem I stayed two days with teacher Miriam Schwartz where I was invited to give a talk on Homa Therapy, Miriam translated for me in Hebrew. I did Vyahruti Homa, demonstrated *Om Tryambakam* Homa and talked for over one hour. People remarked afterwards how they felt all peaceful and calm.

Before leaving Israel to return to my country, Nederland, I spent the last half hour doing *Yajnya (Homa)* in Arad.
